Being a Beast Sep 07 2021 LONGLISTED FOR THE BAILLIE GIFFORD PRIZE 2016 Charles Foster wanted to know what it was like to be a beast: a badger, an otter, a deer, a fox, a swift. What it was really like. And through knowing what it was like he wanted to get down and grapple with the beast in us all. So he tried it out; he lived life as a badger for six weeks, sleeping in a dirt hole and eating earthworms, he came face to face with shrimps as he lived like an otter and he spent hours curled up in a back garden in East London and rooting in bins like an urban fox. A passionate naturalist, Foster realises that every creature creates a different world in its brain and lives

in that world. As humans, we share sensory outputs, lights, smells and sound, but trying to explore what it is actually like to live in another of these worlds, belonging to another species, is a fascinating and unique neuro-scientific challenge. For Foster it is also a literary challenge. Looking at what science can tell us about what happens in a fox's or badger's brain when it picks up a scent, he then uses this to imagine their world for us, to write it through their eyes or rather through the eyes of Charles the beast. An intimate look at the life of animals, neuroscience, psychology, nature writing, memoir and more, it is a journey of extraordinary thrills and surprises, containing wonderful moments of humour and joy, but also providing important lessons for all of us who share life on this precious planet.

Human Biology Jan 31 2021 Written for the introductory human biology course, the Seventh Edition of Chiras' acclaimed text maintains the original organizational theme of homeostasis presented in previous editions to present the fundamental concepts of mammalian biology and human structure and function. Chiras discusses the scientific process in a thought-provoking way that asks students to become deeper, more critical thinkers. The focus on health and homeostasis allows students to learn key concepts while also assessing their own health needs. An updated and enhanced ancillary package includes numerous student and instructor tools to help students get the most out of their course!

Zoobiquity Mar 13 2022 Concerns about the recent explosions of diseases like HIV, the West Nile Virus, and other avian and swine flus that originate in animals have encouraged new efforts on a global scale to bridge the gap between animal and human medicine for the benefit of both. Zoobiquity is the first book to explore many of the human and animal health issues that overlap and provides new insight into the treatment of many diseases including diabetes, cancer, heart disease and mental illness. But Zoobiquity is

even bigger than health and academic medicine, and encompasses much more than our diseases and how to cure them. It sheds light on the evolution of hierarchies and similarities between a tribe of apes and a Fortune 500 company. It suggests that the ways we run our political and justice systems may overlap with how animals protect and defend their territories - and that examining this possibility in a scientifically credible way could help strengthen our institutions. It dangles the possibility that human parenting could be informed by a greater knowledge and respect for how our animal cousins solve issues of childcare, sibling rivalry and infertility.

Thirteenth Year in Zion Nov 21 2022 Growing up in Cortez, Colorado, I was only forty miles from the Utah border. What societal differences those forty miles represent. I was quite oblivious to the history of the settlement and the societies that developed in the two corners of Utah and Colorado until I became a student at Brigham Young University in 1958. With Thirteenth Year in Zion, the LDS confront science, the ideals of America's separation of religion and government, and multicultural America. Chapters begin with a personal memoir from my time in Utah. The memoirs hold the reader's interest. But the book is much more than personal memoirs. I use the stories of my encounters to tie with Mormon behaviors that for nearly two centuries have isolated the Saints from mainstream America

The Theory of Evolution May 15 2022 A century ago Darwin and Wallace explained how evolution could have happened in terms of processes known to take place today. This book describes how their theory has been confirmed, but at the same time "transformed", by recent research.

Facets of Systems Science Dec 10 2021 This book has a rather strange history. It began in Spring 1989, thirteen years after our Systems Science Department at SUNY -Binghamton was established, when I was asked by a group of students in our doctoral program to have a meeting with them. The spokesman of the group, Cliff Joslyn, opened our meeting by stating its purpose. I can closely paraphrase what he said: "We called this meeting to discuss with you, as Chairman of the Department, a fundamental problem with our systems science curriculum. In general, we consider it a good curriculum: we learn a lot of concepts, principles, and methodological tools, mathematical, computational, heuristic, which are fundamental to understanding and dealing with systems. And, yet, we learn virtually nothing about systems science itself. What is systems science? What are its historical roots? What are its aims? Where does it stand and where is it likely to go? These are pressing questions to us. After all,

aren't we supposed to carry the systems science flag after we graduate from this program? We feel that a broad introductory course to systems science is urgently needed in the curriculum. Do you agree with this assessment?" The answer was obvious and, yet, not easy to give: "I agree, of course, but I do not see how the situation could be alleviated in the foreseeable future.
