These two questions have troubled people for centuries. 150 years ago, Charles Darwin wrote two books: "On the Origin of Species" and "The Descent of Man, and Selection in Relation to Sex". In these two books, the theory of species evolution was proposed: all species are constantly evolving; the present people and all species are formed through natural selection. The basis of this theory is based on the comparison of biological forms. Now, knowing that all the genetic information of living things is completely determined with DNA, is evolution still correct? Did humanity evolve from apes? This book will answer these questions. Printbegrænsninger: Der kan printes 10 sider ad gangen og max. 40 sider pr. session First in its Two and a Half Men field.
